METHOD OF RECORDING INFORMATION ON  
A WRITABLE OPTICAL DISC AND A SYSTEM THEREOF

Abstract of the Disclosure

692035

5           A writable optical disc has at least two chapters  
comprising a first chapter and a second chapter.  
Management data including a partition address is written  
in a management area in each chapter, and information is  
written in an information recording area after  
10 management area in the first chapter. A partition data  
is written in a partition area after the information  
recording area of the first chapter. The partition data  
is erased when writing the second chapter, so that the  
first chapter is discriminated from the second chapter,  
15 and a partition data is written in a partition area of  
the second chapter after writing of information in an  
information recording area thereof.
